`74 / 100` User Experience

Mobile

❗ Should Fix:

Configure the viewport

Your page does not have a viewport specified. This causes mobile devices to render your page as it would appear on a desktop browser, scaling it down to fit on a mobile screen. Configure a viewport to allow your page to render properly on all devices.

[Configure a viewport](#) for this page.

Use legible font sizes

The following text on your page renders in a way that may be difficult for some of your visitors to read. [Use legible font sizes](#) to provide a better user experience.

The following text fragments have a small font size. Increase the font size to make them more legible.

- Đây là chuyên...://digimar.vn/ renders only 6 pixels tall (16 CSS pixels) final.

- Password renders only 8 pixels tall (20 CSS pixels) final.

⚠ Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Leverage browser caching for the following cacheable resources:

- https://static.doubleclick.net/instream/ad_status.js (15 minutes)

- https://www.googletagmanager.com/gtag/js?id=UA-139924369-1 (15 minutes)

- https://www.googletagservices.com/activeview/js/current/osd.js?cb=%2Fr20100101 (50 minutes)

- https://pagead2.googlesyndication.com/pagead/js/adsbygoogle.js (60 minutes)

- https://www.google-analytics.com/analytics.js (2 hours)

Reduce server response time

In our test, your server responded in 0.59 seconds.

There are many factors that can slow down your server response time. [Please read our recommendations](#) to learn how you can monitor and measure where your server is spending the most time.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 1 blocking script resources and 6 blocking CSS resources. This causes a delay in rendering your page.

Approximately 4% of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

The entire HTML response was not sufficient to render the above-the-fold content. This usually indicates that additional resources, loaded after HTML parsing, were required to render above-the-fold content. [Prioritize visible content](#) that is needed for rendering above-the-fold by including it directly in the HTML response.

- Only about 27% of the final above-the-fold content could be rendered with the full HTML response.
