 **Should Fix:**

Reduce server response time

In our test, your server responded in 0.76 seconds.

There are many factors that can slow down your server response time. [Please read our recommendations](#) to learn how you can monitor and measure where your server is spending the most time.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 2 blocking script resources and 11 blocking CSS resources. This causes a delay in rendering your page.

Mobile

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

reduction).

- Compressing <https://askofficesetup.com/wp-includes/css/dist/block-library/style.min.css?ver=5.0.4> could save 20.9KiB (83% reduction).
- Compressing <https://askofficesetup.com/wp-includes/css/dashicons.min.css?ver=5.0.4> could save 17.3KiB (39% reduction).

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.
