# PageSpeed Insights

Mobile

84 / 100 Speed

⚠ Should Fix:

## Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 1 blocking script resources and 2 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Remove render-blocking JavaScript:

- http://blog.ir/media/script/main.js?a34AbG

Optimize CSS Delivery of the following:

- http://blog.ir/media/css/sharedrtl.css?GX3q1s

- http://blog.ir/media/css/mainrtl.css?EYAm8p

Mobile

## ⚠ Consider Fixing:

### Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Leverage browser caching for the following cacheable resources:

- https://www.google-analytics.com/analytics.js (2 hours)

### Minify CSS

Compacting CSS code can save many bytes of data and speed up download and parse times.

Minify CSS for the following resources to reduce their size by 2KiB (15% reduction).

- Minifying http://blog.ir/media/css/mainrtl.css?EYAm8p could save 1.4KiB (14% reduction) after compression.
- Minifying http://blog.ir/media/css/sharedrtl.css?GX3q1s could save 632B (18% reduction) after compression.

### Optimize images

Properly formatting and compressing images can save many bytes of data.

Optimize the following images to reduce their size by 3.8KiB (32% reduction).

- Compressing http://blog.ir/media/images/dash-c.png?jyISxr could save 1.6KiB (33% reduction).

- Compressing http://blog.ir/media/images/facThis.gif?jvwOdW could save 1.5KiB (86% reduction).

- Compressing http://blog.ir/media/images/event.png?DtDqGh could save 694B (13% reduction).

# ✅ 6 Passed Rules

## Avoid landing page redirects

Your page has no redirects. Learn more about [avoiding landing page redirects](#).

## Enable compression

You have compression enabled. Learn more about [enabling compression](#).

## Reduce server response time

Your server responded quickly. Learn more about [server response time optimization](#).

## Minify HTML

## Minify JavaScript

Your JavaScript content is minified. Learn more about [minifying JavaScript](#).

## Prioritize visible content

You have the above-the-fold content properly prioritized. Learn more about [prioritizing visible content](#).

# 67 / 100   User Experience

## ⚠ Should Fix:

## Configure the viewport

Your page does not have a viewport specified. This causes mobile devices to render your page as it would appear on a desktop browser, scaling it down to fit on a mobile screen. Configure a viewport to allow your page to render properly on all devices.

[Configure a viewport](#) for this page.

## Use legible font sizes

The following text on your page renders in a way that may be difficult for some of your visitors to read. [Use legible font sizes](#) to provide a better user experience.

The following text fragments have a small font size. Increase the font size to make them more legible.

- وبلاگ‌های به روز شده and 4 others render 4 pixels tall (11 CSS pixels) final.
- جستجو در وبلاگ‌ها renders only 6 pixels tall (15 CSS pixels) final.
- درباره بلاگ renders only 6 pixels tall (15 CSS pixels) final.
- بلاگ بیان رسان...ود تمرکز کنند. renders only 4 pixels tall (11 CSS pixels) final.
- فهرست امکانات بلاگ and 1 others render only 6 pixels tall (15 CSS pixels) final.
- امکان محافظت ا...هم یا اختصاصی and 7 others render only 5 pixels tall (14 CSS pixels) final.
- بیشتر ... renders only 4 pixels tall (11 CSS pixels) final.
- زکات علم، نشر...وبلاگ ها است. renders only 4 pixels tall (10 CSS pixels) final.
- کلیه حقوق برای and 1 others render only 4 pixels tall (11 CSS pixels) final.

Mobile

## ⚠ Consider Fixing:

## Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target <a href="//bayan.ir/reg.../?service=blog">ثبت نام</a> is close to 2 other tap targets final.

- The tap target <input type="submit" class="searchBtn"> is close to 1 other tap targets final.

- The tap target <div class="featureSliderPrev"> is close to 1 other tap targets final.

- The tap target <div class="featureSliderNext"> is close to 1 other tap targets final.

## ✔ 2 Passed Rules

## Avoid plugins

Your page does not appear to use plugins, which would prevent content from being usable on many platforms. Learn more about the importance of [avoiding plugins](#).

## Size content to viewport

The contents of your page fit within the viewport. Learn more about [sizing content to the viewport](#).
