Viruses and malware have turned out to be among the largest risks for computer users. Every time you browse the web or connect your system and any external drive, it raises the danger to be infected by malicious software. Hence, to safeguard your system from viruses you need a good antivirus, which can cancel out the danger of virus and malware in the body.

 Should Fix:

Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 1 blocking script resources and 3 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.
