## Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- <https://pagead2.googlesyndication.com/pagead/js/adsbygoogle.js> (60 minutes)

## Optimize images

## Mobile

Properly formatting and compressing images can save many bytes of data.

[Optimize the following images](#) to reduce their size by 2.2KiB (20% reduction).

- Compressing <https://tpc.googlesyndication.com/simgad/13990836821770315634> could save 2.2KiB (20% reduction).

### ! Should Fix:

#### Configure the viewport

Your page does not have a viewport specified. This causes mobile devices to render your page as it would appear on a desktop browser, scaling it down to fit on a mobile screen. Configure a viewport to allow your page to render properly on all devices.

[Configure a viewport](#) for this page.

#### Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target `<a href="https://sarkarresultgov.com" class="parent">Home</a>` is close to 1 other tap targets final.
