⚠ Should Fix:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

Leverage browser caching for the following cacheable resources:

- https://truongcaodangduocsaigon.net/wp-content/plugins/contact-form-7/images/ajax-loader.gif (expiration not specified)

- https://truongcaodangduocsaigon.net/wp-content/plugins/wp-postratings/images/stars_crystal/rating_over.gif (expiration not specified)

Reduce server response time

In our test, your server responded in 0.56 seconds.

There are many factors that can slow down your server response time. Please read our recommendations to learn how you can monitor and measure where your server is spending the most time.

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 1 blocking script resources and 1 blocking CSS resources. This causes a delay in rendering your page.

Approximately 43% of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Remove render-blocking JavaScript:

- https://truongcaodangduocsaigon.net/wp-includes/js/jquery/jquery.js

Optimize CSS Delivery of the following:

- https://truongcaodangduocsaigon.net/wp-content/plugins/wordpress-23-related-posts-plugin/static/themes/modern.css?version=3.6.4

Mobile

⚠ Consider Fixing:

Enable compression

Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.

Enable compression for the following resources to reduce their transfer size by 478B (56% reduction).

- Compressing https://images.dmca.com/Badges/DMCABadgeHelper.min.js could save 478B (56% reduction).

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

Minify JavaScript for the following resources to reduce their size by 341B (41% reduction).

- Minifying https://images.dmca.com/Badges/DMCABadgeHelper.min.js could save 341B (41% reduction).

Optimize images

Properly formatting and compressing images can save many bytes of data.

Optimize the following images to reduce their size by 42KiB (31% reduction).

- Compressing and resizing https://truongcaodangduocsaigon.net/wp-content/uploads/2018/10/LOGO-TR%C6%AF%E1%BB%9CNG-CAO-%C4%90%E1%BA%B2NG-D%C6%AF%E1%BB%A2C-S%C3%80I-G%C3%92N.png could save 21.4KiB (72% reduction).
- Compressing https://truongcaodangduocsaigon.net/wp-content/themes/tin-tuc/images/reg-

bg.jpg could save 11.3KiB (15% reduction).

- Compressing https://truongcaodangduocsaigon.net/wp-content/uploads/2018/11/26.jpg could save 7.5KiB (28% reduction).

- Compressing https://truongcaodangduocsaigon.net/wp-content/themes/tin-tuc/images/wf7-submit.jpg could save 939B (73% reduction).

- Compressing https://images.dmca.com/Badges/dmca_protected_sml_120l.png?ID=73434faf-7ddb-4042-8e11-9551c9dc6038 could save 599B (29% reduction).

- Compressing https://truongcaodangduocsaigon.net/wp-content/plugins/wp-postratings/images/stars_crystal/rating_over.gif could save 365B (37% reduction).

Prioritize visible content

Your page requires additional network round trips to render the above-the-fold content. For best performance, reduce the amount of HTML needed to render above-the-fold content.

84.6KiB of the HTML response was required to render the above-the-fold content. This requires 3 network round-trips. Prioritize the above-the-fold content so that it can be rendered with only the first 2 round-trips' worth of HTML.

- Only about 43% of the final above-the-fold content could be rendered with the HTML delivered within 2 round-trips.

- Click to see the screenshot with 2 round trips: snapshot:2

✔ 3 Passed Rules

Avoid landing page redirects

Your page has no redirects. Learn more about avoiding landing page redirects.

Minify CSS

Your CSS is minified. Learn more about minifying CSS.

Minify HTML

Your HTML is minified. Learn more about [minifying HTML](#).

99 / 100 User Experience

⚠️ Consider Fixing:

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider [making these tap targets larger](#) to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target <button type="button" class="flickity-butto...utton previous"></button> and 1 others are close to other tap targets.

- The tap target <input type="radio" name="hoc-van"> and 8 others are close to other tap targets.

✅ 4 Passed Rules

Avoid plugins

Your page does not appear to use plugins, which would prevent content from being usable on many platforms. Learn more about the importance of [avoiding plugins](#).

Configure the viewport

Your page specifies a viewport matching the device's size, which allows it to render properly on all devices. Learn more about [configuring viewports](#).

Mobile

Size content to viewport

The contents of your page fit within the viewport. Learn more about sizing content to the viewport.

Use legible font sizes

The text on your page is legible. Learn more about using legible font sizes.
